T1V ThinkHub Collaboration Platform Updates Include ThinkHub Templates, New Help Section, and Several UI/UX Improvements

T1V has released ThinkHub 5.5 and T1V App 5.5. The new software versions include ThinkHub Templates, a new and improved Help section, and several UI/UX improvements across the ThinkHub platform.

T1V is excited to announce software release 5.5 updates to its ThinkHub and T1V app collaboration solutions. These updates are available to all existing customers as a free upgrade, and will be included in standard ThinkHub moving forward. This update is part of T1V's continued effort to push ongoing improvements to its collaboration platform.

In ThinkHub 5.5, users can now select from a library of ThinkHub Templates to kick off their collaborative work session. Current templates include: 4P Marketing Mix, Competitor Analysis, Daily Stand-up, Design Research, Disney Creative Strategy, Idea Funnel Backlog, Mad Sad Glad Retrospective, Perceptual Map, Product Positioning, Project Scope Template, Scenario Planning, SWOT Analysis, and RAID Log.

The Templates are crafted for collaborative team meetings at a high level, enhancing the speed at which users can collectively tackle business challenges.

In both ThinkHub and T1V app 5.5, the Help section has been updated to open T1V's new web-based help page, and features quick-start product videos, access to the user guide, and links to the T1V Knowledge Base. This improvement to Help is designed to better educate the user on how to get started with ThinkHub and T1V app.

Users have the option to customize the Help link, if they would prefer to direct the user to their own version of branded support content and/or support contact information.

To accelerate meeting startup times, users who are in T1V App 5.5 and are connected to a ThinkHub 5.5 Room can now copy/paste their meeting URL into the 'Send URL' text box, which will then launch the video conference on the ThinkHub Room Canvas.

This method of starting the meeting can be done by a remote user, or anyone in the ThinkHub Room to launch the video conference from your app. This is useful for launching ad-hoc Zoom or MS Teams meetings where you want to patch a remote collaborator into your meeting, or if an external partner has scheduled a Zoom or Teams call that you want to join from your ThinkHub Room.

In ThinkHub Cloud, users now have the ability to create Canvas Folders to better organize their ThinkHub Cloud Canvases. With the new Multi-Select tool, users can select multiple ThinkHub Cloud Canvases and apply group changes to the selected Canvases, such as delete, duplicate, or move into a ThinkHub Cloud Canvas folder.

Finally, is ThinkHub Browser Bookmarks. Browser Bookmarks is a dedicated area to 'bookmark' your favorite or most-viewed websites. Available in the content menu, you can add any number of websites to your bookmarks tool.

Additionally, you can toggle on 'auto-update' to automatically refresh your web-based content (this feature is currently by request only). This is particularly helpful for dashboarding sessions, where teams are reviewing metrics across different web-based platforms.

This is especially useful in team or project rooms and executive offices, where teams are habitually reviewing the same data and tracking progress / updates across multiple websites. Examples include: Google Drive, YouTube, Office 365, SmartSheets, PowerBI, Tableau, Box, Dropbox, Monday, Canva, JIRA, and more.
