

## T1V Product Release Notes: November 26, 2024

### T1V App 5.6

#### **ThinkHub Cloud AI Assistant**

New in ThinkHub Cloud, enjoy the power of AI with our integrated AI Assistant. Select the Open AI / ChatGPT icon in the left menu, and use the Assistant to kick off a brainstorming session, conduct research, develop content ideas, and more.

Prompt the AI Assistant in the dedicated prompt text box, and the Assistant will generate text in the box below. Depending on the text supplied by the AI Assistant, you can either 'Send to Canvas,' which will send a single note with the AI content to the Canvas, or you can select 'Split to Canvas,' which will send multiple notes to the Canvas. These options depend on how the AI Assistant responds to your prompt.

The AI Assistant is a powerful tool to collaborate with your team and populate content to your shared ThinkHub Cloud Canvases.

### ThinkHub 5.6

**Version: 8.08**

#### **ThinkHub Groups Update: Edit View**

Users now have the ability to control the viewport of their ThinkHub Groups. To do so, users can navigate to the Group Legend in the ThinkHub Menu, and select 'edit view' in the top right corner of the Group Legend Submenu. Then, the user can adjust the Canvas view, and select 'save.' To undo this view, the user can select 'reset.'

The Group Legend is not only a way to jump from groups of content, but to navigate the massive Canvas and make presentations more fluid. By default, jumping to a Group from the Group Legend will center the content in the Canvas view. Now, users can optimize their Group content in a way that fits their presentation style best, with the ability to edit the Canvas view.

#### **Pin to Glass - Videoconference**

New to ThinkHub Room, users can now 'pin' their video conferencing app to a specific placement on the touchscreen glass. Not to be confused with pin to Canvas, which locks the asset onto a fixed position on the Canvas, the pin to glass functionality means you can navigate the ThinkHub Canvas while your video conferencing participants remain parked in a dedicated area.

Note: pin to glass is not available in ThinkHub Cloud or ThinkHub MultiSite.

## **Drawing Tools - UI Update**

Annotation Mode (the pen icon to the right of the arrow, in the top row of the Drawing Tools menu), now changes the background of the Canvas to provide a strong visual reference for users to know they are in annotate mode. Once they exit annotation mode, the Canvas background will revert to gridlines. If gridlines are turned off, the user will see the dots appear on the Canvas background when in annotation mode.
