

TIVHub™

WIRELESSLY CONNECT + COLLABORATE

Collaboration relies on the ability to connect.

The TIV Hub is a wireless presentation tool that enables users to share content from device screens onto a single display for seamless group meetings.

Ideal for presentations, projects, or meetings that require teams to view multiple pieces of content at once, the Hub keeps you connected and on track.

Screen Mirroring

share device screens instantly

Application Window Sharing

share your entire screen or select a specific app window to share

BYOD (bring your own device)

designed to support any device across all major platforms (macOS, iOS, Windows, Android, and Linux)

High Performance, MultiStreaming

stream multiple devices at the same time, without interruption or interference

Enhances Collaboration

share content immediately and keep everyone on the same page, regardless of their physical location

Scalable and Flexible

unlimited user licenses enable guests, customers, or anyone else to connect and participate in all Hub sessions

Software-based Solution

ongoing software updates free of charge, including new features, bug fixes, and security enhancements

Single/Quad Mode

different view options for in room and remote participants

Enterprise Management

manage your Hubs with TIV's CCC (centralized control console), making large-scale rollouts a breeze for AV and IT teams

Remote Collaboration

supports participants connecting from any network - with the ability to share devices and view, digitally point, and control the Hub board

ENHANCE THE QUALITY OF YOUR WORK THROUGH TOTAL SYNCHRONIZATION

Interact from any device, anywhere, via laptops, tablets, and smartphones. View the same content while also collaborating wirelessly and in real-time. Instead of hovering around an individual screen or switching the view of a shared screen, the Hub allows you to see everything, all at once. Elevate your collaboration with the Hub.
